

## Did you meet **Cyber McNasty**?

We were delighted to receive so many positive responses from those who recently attended our 'Under the Radar' webinar event!

Even though cybercriminal Cyber McNasty infiltrated the industry event - we were delighted to hear that the content was valuable to so many.

Cybercrime is on the increase in our maritime community – we all need to protect our most valuable assets from all cybercriminal organisations.

If you want to see how a cybercriminal like Cyber McNasty could target you and your organisation watch the video on our YouTube channel – [click here](#) 

“ Thank you for an excellent presentation – looking forward to more McNasty! ”

“ Very interesting how many professionals and crew are attending today! ”

“ Fantastic session – very eye opening ”

“ 100% yacht crew requirement ”

Isle of Man | London | Monaco | Fort Lauderdale

## Do you use Facebook? Global data hack discovered.

Facebook users data were leaked for free on hacking forum it has been discovered. Around 533 million Facebook users have been affected by this data breach, with phone numbers, Facebook ID, full name, location, past location, birth date, email address, account creation date, relationship status, and personal bios available.

The data was hacked by exploiting a vulnerability that enabled automated scripts to scrape Facebook users' public profiles and associated private phone numbers. Facebook has since fixed the technology flaw.

Unfortunately the leaked information is still available and can be used to conduct attacks on the people listed in the leak. Emails can be used for phishing attacks, phone numbers used for Smishing attacks (SMS phishing), and even SIM swaps to steal multi-factor authentication codes.

We advise that all Facebook users be wary of strange emails or texts requesting further information or telling you to click on enclosed links. Contact [support@cssplatinum.com](mailto:support@cssplatinum.com) if you are concerned about this attack.

## How Social Engineering is targeting YOU!

In our webinar '[Under the Radar](#)' we watched as cybercriminal Cyber McNasty created a socially engineered cyber attack on the Captain and Crew of Superyacht CSS Platinum.

Social Engineering is a method of cyber-attack which uses information gained on an individual or organisation from the dark web to build bespoke profiles and uses that data for targeted attacks.

Social engineering can involve months of reconnaissance on a target, gaining intelligence, building a credible backstory for an attack. This can take time but makes it plausible when the cyber-attacks starts to take place.

The information gained is critical. The cyber-attack can then take the form of a personally tailored cyber attack, that may use one of the following based on the intelligence gained:

**Fear – Excitement – Curiosity – Anger – Guilt – Sadness**

### See how a socially engineered cyber attack happens:

We role play how a cybercriminal (Cyber McNasty) targets Crew members and the Captain of a superyacht in our webinar 'Under the Radar'.
